Pulse SMS

- The Pulse SMS app provides connectivity between a smartphone and a PC (similar to Intel Unison)
- I use the Android app on my phone and the Windows executable app on my computer *
- I can access text messages using a browser (or even with a browser extension)
- I've been using this app since back in the Windows 7 days and it still works just fine

** I tried Windows Phone but I found it very unreliable*

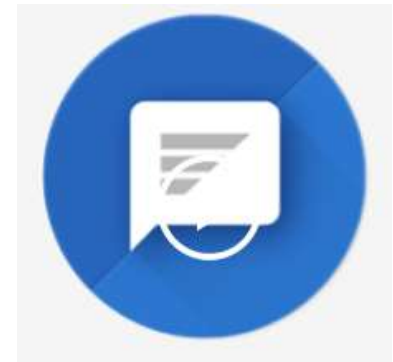

Jeff Dubois

Pulse SMS (Phone/Tablet/Web)

Maple Media

Teen ⓘ

Want an SMS app that is fast, secure, and packed with all the features and customization you could want?

Send and receive texts and pictures — seamlessly — from your computer, tablet, car, or any device with an internet connection.

This is text messaging, done right.

<https://play.google.com/store/apps/details?id=xyz.klinker.messenger>

- Text messages can be accessed using a web browser (or even a browser extension, e.g. Brave, Firefox)
- I simply load Pulse SMS onto the PC and let it run in the background
- If a text comes in, it pops up on the computer screen
- What I really, really, really like is that, from the computer, it is very easy to schedule a text message. I can easily call up Pulse SMS on the computer and send a scheduled text on any date and time

Pinning Apps to the Taskbar

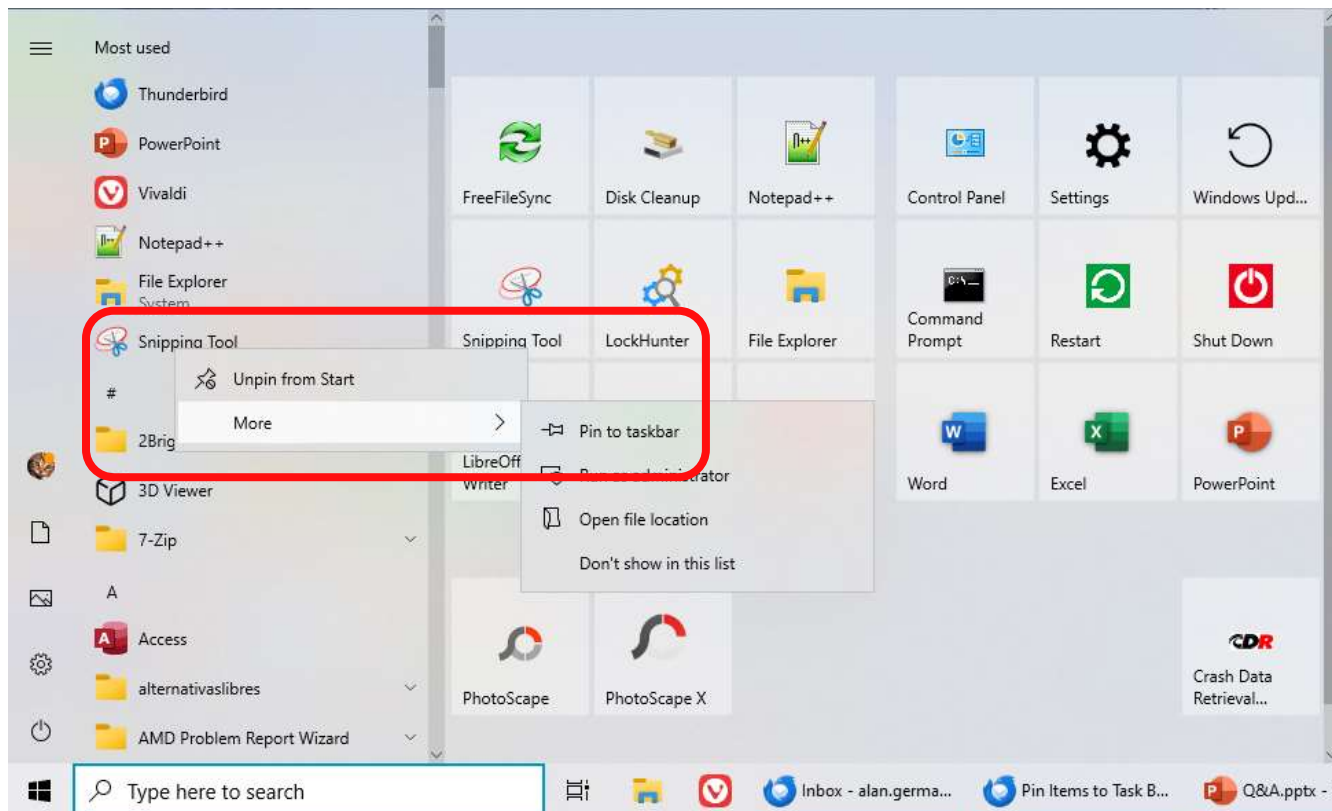

Bob Herres

- I'm getting tired of hunting down my apps in long lists or trying to find them among a bunch of icons on my desktop
- So, I've finally learned how to pin things to my Taskbar!
- It's very easy and I only have to do it once
- No more searching all over the place!
- This makes finding my favorite apps quick and easy!

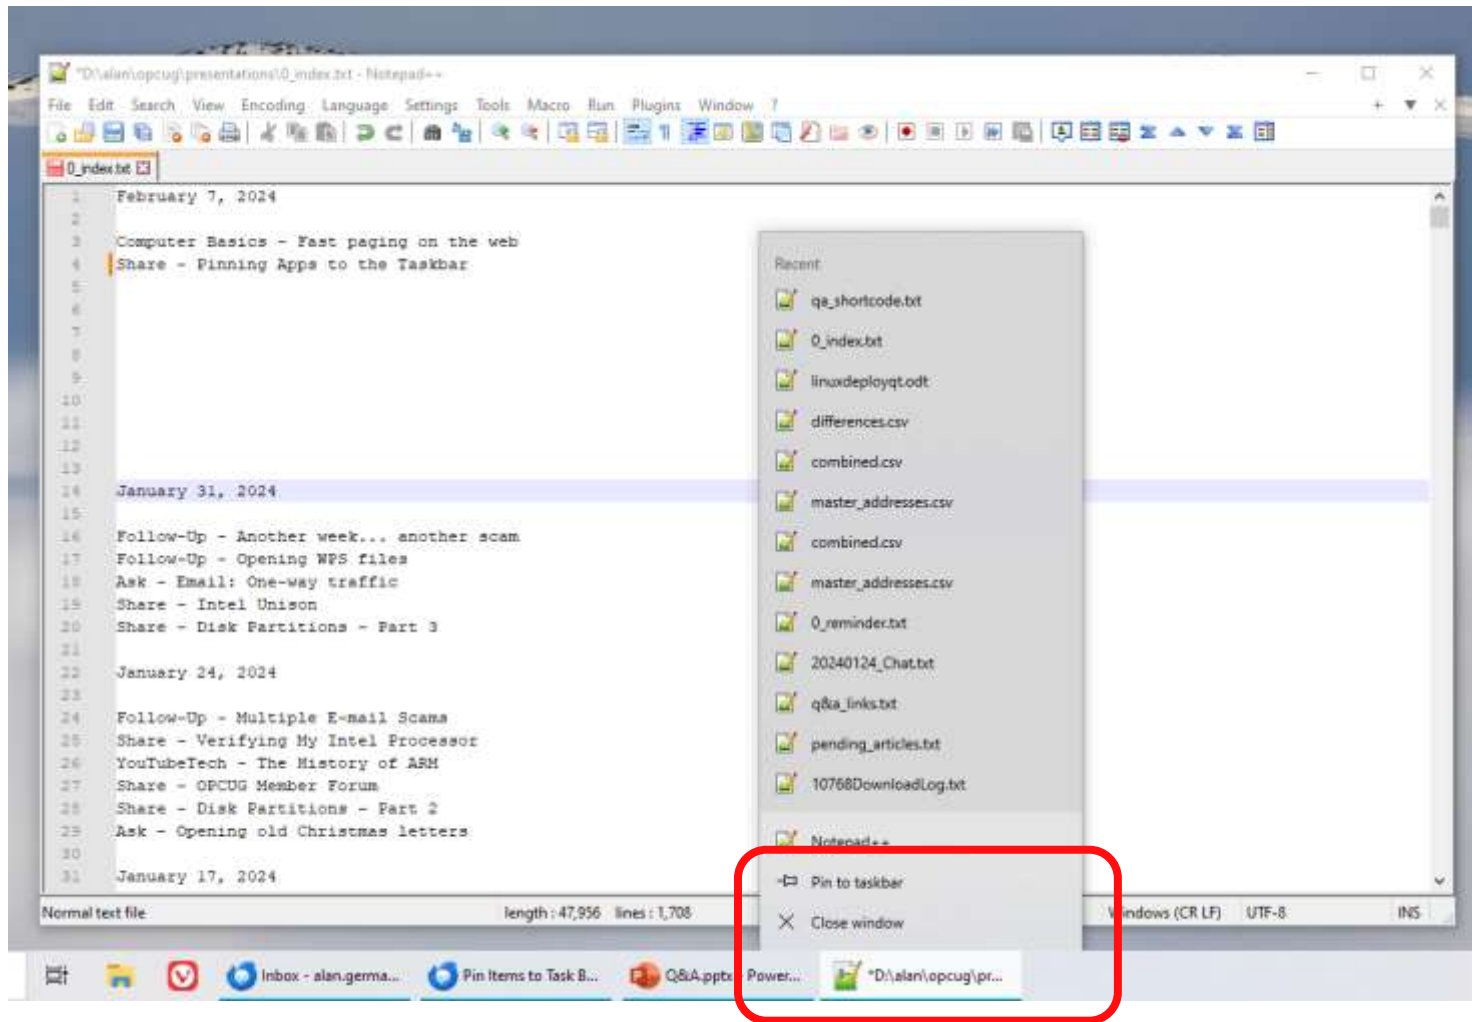

You can pin items to the task bar in several ways...

- From the Start menu or apps list, press and hold (or right-click) an app
- Select "*Pin to taskbar*" or "*More > Pin to taskbar*"

- If the app you want to pin, is already open on the desktop, you can press and hold (or right-click) the app's taskbar icon and then select "*Pin to taskbar*"

What programs read Webp graphics

- Alan posted in OPCUG-Member-forum
 - *4 dangerous PC security exploits being attacked right now*
 - <https://www.pcworld.com/article/2226116/the-most-dangerous-current-security-vulnerabilities.html>
- Elizabeth pointed out the article says
 - *You should therefore immediately update any software that can read Webp graphics to the latest version number.*
- And asked
 - *Assuming the browsers are ok, how would one check for programs that read Webp?*

Good question!

- Asked Microsoft Copilot (powered by ChatGPT 4)
 - *How do I see what programs are able to view webp graphics?*
- Copilot replied
 - *To view WebP graphics on your Windows computer, you'll need an application that supports this format. And gave some options*
 - PhotoScape X
 - Pixlr Suite
 - Snagit
 - qView
- That sounds manageable

Complete answer?

- Vulnerability is in the library *libwebp*
- *libwebp* packages are used in *hundreds* of applications
 - 11 web browsers, 12 social media apps, 5 video platforms, 10 graphics programs, 4 cloud storage programs, 5 ecommerce platforms, 3 content management systems, 10 photo editors, 3 game engines, 46 desktop software, 3 mobile platforms, dozens of developer tools, and more

<https://blog.morphisec.com/analysis-and-prevention-of-the-webp-libwebp-zero-day-vulnerability>

MORPHISEC

What's a user to do?

- Give up...turn off your computer
- **That's not helpful, Chris!!!**
- Keep all your software up-to-date

I have just started looking at Glarysoft Software Update

- <https://www.glarysoft.com/downloads/?p=su-page>

Glarysoft Software Update

Not free updates

Update manager
not a
Vulnerability manager

And if my programs are up-to-date...

Does that mean my computer is safe to use?

Not necessarily...

But I want to be sure my computer is not vulnerable!

That's pretty easy, actually

- turn off your computer
- encase it in concrete
- drop it in the middle of the ocean

Seriously...just keep all your software up-to-date

No vulnerability scanners?

- With the demise of Personal Security Inspector (PSI) and Software Update Monitor (SUMo) are there any available free vulnerability scanners?
- VulnDetect was a proposed alternative (<https://vulndetect.org>)
- But, the website is very confusing...

Version 3.3.0.0 is available as a Tech Preview. Please install and run the Tech Preview on a few hosts and report if there are issues.

Please test 3.3.0.0 on a few selected hosts and report if you find issues:

<https://vulndetect.com/dl/agents/secteerSetup-3.3.0.0.exe>

<https://vulndetect.com/dl/agents/secteerSetup-3.3.0.0.msi>

Tom **VULNDETECT TEAM MEMBER**

 Oct 4, 2018, 8:03 AM

The **Recommended agent for general deployment** can be **downloaded** from:

<https://vulndetect.com/dl/secteerSetup.exe>

Version 3.3.2.0 is available as a Tech Preview. Please install and run the Tech Preview on a few hosts and report if there are issues.

Tech Preview 3.3.2.0 works around an issue in a WIN32 API, otherwise it is identical to 3.3.0.0. There are some notable changes in 3.3.0.0, including a fix for a bug where tasks would appear stale after the tasks completed. 3.3.0.0 also collects some additional information for Azure AD joined hosts, which is required for upcoming features. It should now be possible to install the MSI interactively on the local
